	¹ Operative Mortality is defined as patient death occurring in the hospital after isolated CABG surgery, regardless of length of stay, or death occurring anywhere after hospital discharge but within 30 days after the isolated CABG surgery. Hospital ratings are risk-adjusted using a statistical technique that allows for fair comparison of hospital outcomes even though some hospitals have sicker patients than average.										
² Post-Operative Stroke is defined as a post-operative, central neurologic deficit persisting for more than 24 hours after isolated CABG surgery while in the operating hospital.											
³ Readmission is defined as an isolated CABG surgery patient being readmitted to an acute care hospital within 30 days of being discharged to home or a non-acute care setting with a principal diagnosis indicating a heart-related condition, or an infection or a complication that was likely related to the CABG surgery.											
⁴ Internal Mammary Artery (IMA) Usage in CABG surgery is an evidence-based indicator of surgery quality. Clinical research shows that IMA grafts used in CABG surgery stay open longer and increase patients' survival. Very low hospital utilization rates may be associated with poorer care. Hospitals are not assessed for very high IMA usage rates because there is no consensus on what constitutes an optimal rate. Most first-time CABG surgery patients are eligible to receive an IMA bypass.											
[#] The performance rating is based on a comparison of each provider's risk-adjusted mortality/stroke/readmission rate to the California observed mortality/stroke/readmission rate. A provider is classified as “Better” if the upper 95% confidence limit of its risk-adjusted mortality/stroke/readmission rate falls below California observed mortality/stroke/readmission rate. A provider is classified as “Worse” if the lower 95% confidence limit of it risk-adjusted mortality/stroke/readmission rate is higher than the California observed mortality/stroke/readmission rate. A provider is classified as “Average” if the California mortality/stroke/readmission rate falls within the confidence interval of the provider's risk adjusted mortality/stroke/readmission rate.
